From the company that revolutionized the mortarless masonry industry business, comes the patented Azar Mortarless Building Systems for the Do-It-Yourself market. With AZAR Mortarless Building Systems, construction projects can be done in only a fraction of the time with professional results. AZAR is up to 10x faster than conventional bonded block masonry, formed or cast-in-place concrete methods of construction. Because little, if any, mortar is required to build with AZAR masonry, projects are now within easy reach of the Do-It-Yourselfer.

Professional crews can enjoy increased profitability due to the speed and efficiency of installation. The 'as built' finished look resembles a conventional mortared system. Increase landscape beauty by selecting from among a variety of surface finish options such as paint, stucco, tile and rock.

Typical Installation:

Square up and lay out the first course, "lay" a level mortar setting bed if required to plumb & level the first course, drill & pin the footer (usually every 24" on center, check local building code for the required placement) Dry-stack the remaining units for the project using a string-line with line blocks to ensure the wall remains straight & level.

Note: Shimming or grinding may be required

Upon completion of wall, fill cores solid with concrete, and/or surface bond as required. *Please review reinforcement schedule for required placement of re-rod.*

AZAR FEATURES AND BENEFITS...

The AZAR patented design provides fast reliable and economical alternative to traditional masonry block and poured concrete methods.

Conventional mortar construction is difficult, messy and time consuming. The AZAR system streamlines and simplifies the process making professional, reliable masonry possible.

AZAR has been designed and tested to be used in all types of construction, from the smallest of backyard projects requiring only a few blocks to the much larger residential, commercial or industrial projects requiring thousands of blocks.

Contractors can reap increased profitability by delivering more projects in less time using smaller crews!

AZAR can be built as -is or a surface bond can be applied to increase aesthetics. From a purely functional gray wall, to a decorative stucco, tile or painted color to increase the value of property, AZAR delivers unlimited design potential.

AZAR Mortarless concrete masonry units comply with NER-683, ASTM C90, SCA-A165.I, CCMC 12873 and can be used to construct load bearing and non-load bearing walls without the required use of mortar.

PRODUCT TECHNICAL DATA

Azar 4 Stretcher
Nominal Dimensions
8"Wx 8"Hx 16"H

Azar 4 Right Corner
Nominal Dimensions
16"Lx 8"Wx 8"H

Azar 4 Left Corner
Nominal Dimensions
16"Lx 8"Wx 8"H

Azar 4 Half Sash
Nominal Dimensions
8"Lx 8"Wx 8"H

Azar 4 Full Sash
Nominal Dimensions
16"Lx 8"Wx 8"H

Equipment needed

- Tape measures
- Chalk Line
- Masonry Hammer
- Hand Level (Four foot is best)
- Shovel
- Hoe
- Trowel
- Pre Mixed Mortar
- Inexpensive Masonry Cut-Off Wheel (*Fits on a standard circular saw*)

Mortarless Split Face

Azar Block™
